

# Eucalyptus Oil

Nourishing Skin. Naturally.

## Overview

Eucalyptus Oil comes from the leaves of the Eucalyptus globulus, a tall and rapidly growing evergreen tree that can reach up to 55 meters in height under temperate climate conditions.

The oil is a colourless to pale yellow liquid and has a fresh, robust, and slightly minty-green aroma. The oil blends well with various wood, herb, and citrus oils, making it an ideal choice for creating pleasing fragrances in any formulation.

Harvesting can occur at any time of the year; typically, the tree yields around 0.8% to 1% of essential oil. This means approximately 100 to 120 kilograms of botanical material is required to produce 1 kilogram of oil.

## Properties, benefits & uses

Eucalyptus Oil is widely utilized in the personal care, food & beverage, and aromatherapy industries due to its healing properties and unique flavor. Its anti-inflammatory, antibacterial, and analgesic qualities make it a potent natural remedy.

When applied topically, Eucalyptus Oil aids in the restoration and fortification of the skin. Additionally, Eucalyptus Oil is known for its moisturizing effects on the skin.

## Product Information

### Description

Eucalyptus Oil is an essential oil harvested from the leaves of the the plant.

### INCI

Eucalyptus Globulus Leaf Oil

### Origin

Brazil / Madagascar / Vietnam

### CAS No.

85203-56-1

### EC No.

286-249-8

### Grades Available

Certified organic and conventional

- floviva Eucalyptus Oil globulus
