Chamomile Roman Oil

Nourishing Skin. Naturally.

ProTec
Botanica

Overview

Chamomile Roman Oil comes from the Anthemis Nobilis plant, a resilient perennial with sustainable white flowers for oil production. Resembling daisies, the Roman Chamomile plant reaches 15-45 cm in height and blooms within 6-8 weeks, with harvested buds. This perennial crop is planted every eight years in May and harvested in July or August annually.

- Our UK farmers, with over four generations of experience, extract essential oils. Roman Chamomile flowers typically yield 0.4%-1.0% essential oil, requiring 100-250kg of flowers for 1kg of oil. This English oil is highly regarded for its herbaceous, sweet, fruity scent with subtle hints of hay or tea leaves.

Properties, benefits & uses

Chamomile Roman Oil finds common application in high-end perfumes and personal care products. It possesses a range of beneficial properties that aid in addressing digestive issues like nausea, vomiting, and intestinal gas. Additionally, its anti-inflammatory properties make Chamomile Roman Oil effective in soothing muscles, alleviating pain, reducing swelling, and relieving irritation.

Product Information
